Press Release – 6 December 2006

Kenma is proud to introduce the Scorpio SR-i500SW advanced motorcycle alarm system from Aritronix USA, leaders in motorcycle security for the past 15 years. The Scorpio alarm system uses the latest detection, communications and manufacturing technologies to be ultra-compact, extremely robust and effective. It remains the first two-way FM security system designed specifically for bikes.

The system uses high frequency RF technology for communications and is capable of sending and receiving data up to a distance of 800m. The technology enables it to function even in difficult areas such as high-rise flats and apartments, shopping centres and underground car parks. The transceiver (70x33x15mm) provides full control of the alarm and has a LCD for commands and alarm triggers with easy to understand icons and text. The transceiver does not require batteries and comes with a charger, each charge lasting several weeks of use.

The alarm module (90x60x20mm) is easily located on most bikes and is unaffected by mounting position or angle. This unit has been designed to take the punishment of motorcycle use as well as deafen would-be thieves/wake up the neighbours with a 125dB multi tone siren. Both the alarm module and transceiver are waterproof.

The alarm detects shock, motion, tilt and interference with the bike's electrical system. It also has a perimeter sensor that warns people away if they get too close to your bike, without even touching it! For further security there is a ignition disable/anti hi-jack upgrade that allows you to remotely disable the ignition even if the keys are in the bike and the alarm is off. For more information visit <http://www.scorpioalarms.com/>.

Fitments

You can buy the SR-i500SW as a model-specific kit, which includes a dedicated plug-in loom that connects directly to the factory connectors on your bike, or simply purchase the SR-i500SW only, which includes a generic loom (suitable for any bike) and full instructions.

Pricing & Availability

The SR-i500SW alarm retails from \$566.00 for the basic alarm, \$600.00 for a kit with a dedicated plug-in loom and \$50.00 extra for the ignition disable upgrade. Prices include 10% GST. Available now through leading motorcycle accessory retailers.
